Agro advisory based on advices received from the experts of agromet-advisory committee

- Keeping in view the mainly clear sky condition for the coming few days, farmers are advised to keep continue the harvest of mature crops. Storage place should be clean / insect free.
- In present weather condition, field preparation should be started for *rabi* crops. Ploughing and planking should be done properly to conserve the moisture in the soil. Soil testing should be done before sowing of new crop.
- To do sowing of onion. Seed treatment must be applied before sowing.
- Hoeing should be done in vegetable pea, cabbage, fenugreek, spinach etc. Drenching should be done during hoeing using biological agents such as trichoderma, pseudomonas, beauveria etc.
- Apply recommended dose of granular Chloropyrifos into the soil for termite/pest control.
- Installed honey boxes in Farm.
- Mushroom cultivation should be started.
- Maintain proper moisture in fruit bearing trees during fruit development. 2-3 application of Bordeaux mixture (10 grams / liters of water) in regular interval to keep free from disease.
- If die back disease appear in citrus plant, remove affected branches and buried it. Apply copper oxychloride @0.2%.
- In this season, after harvesting in apple orchard; spray Urea (2kg/200liter of water) to dropping the old leaves and destroy the mycelium of scab.
- To protect livestock from ticks, use the Butox medication @ 1 ml per liter of water and wipe body during daytime (sunlight) and bath the animal after two hours.
- Vaccination for Foot and Mouth Disease (FMD) should be done in bovine animals.
- Keeping in view of gradual decrease of minimum temperature, farmers are advised to protect young one from cold by covering them with gunny bags during night and give some sunlight during day time.
