### **Agro advisory based on advices received from the experts of agromet-advisory committee**

- Keeping in view the mainly clear sky and no rainfall prediction for the coming few days, farmers are advised to harvesting is done after proper sun drying. Storage place should be clean / insect free.
- To do sowing of onion nursery and leafy vegetables. Seed treatment must be applied before sowing.
- During field preparation, apply granular Chloropyrifos into the soil for pest control.
- Hoeing should be done in vegetable pea and cabbage at seedling stage. Use of biological agents such as trichoderma, pseudomonas, beauveria etc during hoeing to protect against disease on the plant.
- Installed honey boxes in Farm.
- It is suitable time for mushroom cultivation. Compost and spawn purchase from reliable sources.
- Application of Bordeaux mixture (10 grams / liters of water) in fruit bearing plants of lemon / Malta, guava etc. to keep free from disease. Use of micro-nutrients for proper fruit growth.
- In this season, after harvesting in temperate orchards; spray Urea (2kg/200liter of water) to dropping the old leaves and destroy the mycelium of scab.
- Prepare the field for nursery sowing of onion in mid hill areas. Seed treatment must be applied before sowing.
- Harvest mature fruits of walnut and stored after proper Sun drying.
- If die back disease appear in citrus plant, apply copper oxychloride @0.2% and remove die back affected branches and buried it.
- To protect livestock from ticks, use the Butox medication @ 1 ml per liter of water and wipe body during daytime (sunlight) and bath the animal after two hours.
- Antibiotic should be given to adult goat/sheep for prevent common cold and viral disease.
- After monsoon withdraws; vaccination for Foot and Mouth Disease (FMD) should be done.
