**Agro advisory based on advices received from the experts of agromet-advisory committee**

- Keeping in view the mainly clear sky condition for the coming few days, farmers are advised to keep continue the harvest of mature crops. Storage place should be clean / insect free.

- In present weather condition, field preparation should be started for *rabi* crops. Ploughing and planking should be done properly to conserve the moisture in the soil. Soil testing should be done before sowing of new crop.
- To do sowing of onion. Seed treatment must be applied before sowing.
- Hoeing should be done in vegetable pea, cabbage, fenugreek, spinach etc. Drenching should be done during hoeing using biological agents such as trichoderma, pseudomonas, beauveria etc.
- Apply recommended dose of granular Chloropyrifos into the soil for control of termite/pest population.
- Installed honey boxes in Farm.
- Mushroom cultivation should be started.
- Maintain proper moisture in fruit bearing trees during fruit development. 2-3 application of Bordeaux mixture (10 grams / liters of water) in regular interval to keep free from disease.
- If die back disease appear in citrus plant, remove affected branches and buried it. Apply copper oxychloride @0.2%.
- In this season, after harvesting in apple orchard; spray Urea (2kg/200liter of water) to dropping the old leaves and destroy the mycelium of scab.
- To protect livestock from ticks, use the Butox medication @ 1 ml per liter of water and wipe body during daytime (sunlight) and bath the animal after two hours.
- Vaccination should be done to protect from Foot and Mouth Disease (FMD).
